

Overview

AmberCloud is an IoT platform for dataloggers, which provides easy connectivity for all your devices. It is a central place to manage and consult sensor data. It enables the experience from today's connected world.

Benefits and Features

- Easy connectivity with electronic devices with multiple sensors
- Dashboard information of the devices
- Device information management
- Device Sensors configuration
- Sensor values unit conversion
- Cron jobs with daily report
- Cron jobs with Panic alarms
- Data visualization with Charts
- Data Export excel
- Data Import from any custom file
- Data Bounce to another server
- Documentation
- Secure and scalable
- High availability
- Secure custom APIs

Need something else?

AmberCloud is a constant evolving solution, talk to us about your needs so we can implement those changes.
